Qore8

How it Works

Qore8's specialized conversion process effortlessly converts 3D CAD data into more portable formats for collaboration and distribution. Users can create custom technical data packages to fit a specific use case or process that is easily accessible, and for anyone to consume.

Create technical packages interactively or through batch application, capturing product structure, product and manufacturing information (PMI), and geometric dimensions and tolerances (GD&T) directly from your PDM/PLM/ERP system. These packages are created from user defined templates. Within this flexible and formidable system, users have the ability to generate a Bill of Material (BOM) upon each revision.

Benefits

- ◆ Digital rights management
- ◆ Easily share the design, without access to CAD
- ◆ Templates and portfolio
- ◆ Access detailed MBD data at any stage of the process to facilitate rapid and seamless delivery

Features

- ◆ Automated authoring capabilities
- ◆ qore3D collects product structure, PMI and GD&T from your PLM/PDM based input
- ◆ Generate 3D interactively from CAD system
- ◆ Custom 3D PDF template management

Applicable Use Cases

- Design Review
- 3D CAD Collaboration
- Presentations
- Lifecycle Management
- Regulatory Compliance
- Submissions
- Secure Document Sharing

- MRO Procedural Submissions
- Quality Management Systems
Documentation (SOPs/WIs)
- Inspection Approvals
- RFP Submission
- Work Instructions
- Part & Assembly Viewing
